Varaha Systems Harnesses Android, iPad for FMC

uMobility now supports over 95% of the world's smart phone market

DALLAS, TX, April 28, 2010 – Varaha Systems, Inc., a leading provider of fixed-mobile convergence (FMC) solutions, announced today that Varaha's uMobility™ solution is now available for Android phones, and Apple's™ iPAD platform.

"Varaha's unique, patented architecture provides its enterprise and service provider customers with many compelling advantages, including support for session hand-off between Wi-Fi and all types of cellular networks" said Prasad Govindarajan, CTO, Varaha Systems. "uMobility's unique architecture once again has quickly delivered the first comprehensive Android solution as well as out-of-the box support of the iPad, with these platforms including full support for session hand-off between wireless networks.

The worldwide market share for the combination of iPhone™, Android™ and Blackberry™ has passed the 40% mark and in the U.S. these three device families now represent nearly 85% of all smart phone sales. So it is no surprise that with the addition of uMobility's support for the Android line, Varaha now supports virtually all commercially available dual mode smart phones. "I joined Varaha because of their ability to deliver products that solve customer's problems" said Manolo Blanco, VP of Sales, CALA. "The addition of the Android platform lineup on the heels of so many Android-based device announcements proves that Varaha's architecture is all it claims to be and more," he added.

Varaha is a long-time Cisco partner and is displaying its complete product line at Interop this week, April 25-29, 2010 (Mandalay Bay, Las Vegas) from the Cisco Partner Pavilion at Booth #1719.
